1. All of these are identity management capabilities of Microsoft 365 **except**:

- ☐ Conditional access
- ☐ B2B
- ☐ Automated investigation and response

2. When you plan for identity governance in Azure AD, you should:

- ☐ Determine which users and groups should have access to which resources at which time.
- ☐ Prioritize the right set of alerts for investigation.
- ☐ Assess the risk levels and business readiness of your organization's cloud apps.

3. Before you deploy a Microsoft 365 identity infrastructure, you should first:

- ☐ Assign access policies to users.
- ☐ Classify data security.
- ☐ Categorize your users.
