

Summary

6 minutes

A sizeable percentage of Woodgrove's Windows 10 devices were out of support or nearing the end of support. Previously, you helped the organization prepare its environment for the Windows 10 feature update, and now you've enabled them to deploy it.

Without a detailed approach to deployment, your company wouldn't be able to successfully apply the update across its environment. Instead, your company can now deploy the update and keep its environment up to date, and secure, as a result.

Check your knowledge

1. Which of these is a task for broad deployment?

- ☐ Obtain recommendations for improvements.
- ☐ Determine broad deployment readiness.
- ☐ Troubleshoot critical applications.

2. During pilot deployment, who is responsible for implementing baseline updates?

- ☐ Process manager
- ☐ Operations
- ☐ End-user computing

3. How many deployment rings should Woodgrove choose?

- ☐ There's a limit of two deployment rings. Woodgrove has to ensure it doesn't have anymore.
- ☐ There's no limit on deployment rings. Woodgrove can choose any number of deployment rings it needs.

- ☐ There is a limit of three deployment rings. Woodgrove has to ensure it doesn't have anymore.

4. What should you do to help support communications about the update?

- ☐ Point to resources and places where users can find information and support for the update.
- ☐ Point to the most technically detailed documentation available, so users can support themselves.
- ☐ Point to the artifacts used during the deployment process so users can support themselves.

5. What's the best tool to accelerate deployment with devices on a remote site with internet connectivity?

- ☐ Windows Update for Business
- ☐ Delivery Optimization
- ☐ Microsoft Connected Cache

6. How can Woodgrove improve the process for the next development cycle?

- ☐ Make a note of issues across workstreams and investigate how they can be resolved or improved.
- ☐ Make a note of issues across devices and investigate how they can be resolved.
- ☐ Make a note of the issues across applications and investigate how they can be resolved.
