Check your knowledge

1. Which of the following should you consider about the user's phone number when making the cut over?

○ Ensure that numbers now include the country dial code; for example, +1 for the US.

○ Ensure that it's no longer routed to the old system.

○ Ensure that the new SIP attribute has been added to the phone number.

2. After running **Get-CsOnlineUser**, you see that **OnPremHostingProvider**, which was SRV, is now sipfed.online.lync.com. Which of the following describes the meaning of this change?

○ Calls to this user will now go to Skype for Business.

○ Calls to this user now bypass the SBC.

○ Direct routing is now enabled for the user.

3. Which of the following describes how to configure the SBC for dynamic routing?

○ Via an LDAP connection to the domain controller.

○ Dynamic routing is enabled on the SBC through PowerShell.

○ By querying the list of users in Teams.

4. Your Skype for Business environment has been decommissioned. A user tells you that their phone number has changed. After running the PowerShell command **Get-CsOnlineUser** for that user, you find **OnPremLineURIManuallySet=False**. Which of the following describes how you'll update the user's phone number?

○ Through Active Directory Users and Groups.

○ **Set-CsUser user -OnPremLineURI value**.

○ Edit the number in the SBC.
