Summary and knowledge check

5 minutes

In this module, you learned how coexistence works when upgrading from Skype for Business to Microsoft Teams, what the coexistence modes are, how interoperability works, and how to manage coexistence.

Now that you have completed this module, you should be able to:

- Explain what coexistence is between Skype for Business and Microsoft Teams and list the coexistence modes.
- Describe how available functionality in Teams client changes based on mode.
- Explain how interoperability works between Teams and Skype for Business.
- Describe how to manage migration and coexistence.

Check your knowledge

1. The default mode when upgrading from Skype for Business to Teams is to:

○ Assign users one of several coexistence modes to ensure that these capabilities don't overlap for that user.

○ Run Teams alongside Skype for Business with the capabilities overlap.

○ Upgrade users directly to TeamsOnly

2. Which of the following statements about interoperability is true?

○ Interoperability allows Teams and Skype for Business to run simultaneously by eliminating overlapping functionality.

○ Interoperability allows Teams and Skype for Business to work together when one user or set of users has one application and other users have the other.

○ Interoperability allows Teams and Skype for Business to run simultaneously with overlapping functionality.

3. Which of the following statements about TeamsUpgradePolicy is true?

○ TeamsUpgradePolicy is the setting where you change coexistence

mode.

○ TeamsUpgradePolicy is the setting where you change coexistence mode and whether to notify Skype for Business users of the change.

○ TeamsUpgradePolicy is the setting where you notify Skype for Business users of the change.
