Knowledge check

3 minutes

Check your knowledge

1. A user has already entered their credentials (such as work email and password) elsewhere. When the user starts Teams, they're not required to reenter their credentials. Which of the following technologies is responsible for this behavior?

     ○   Multi-factor authentication

     ○   Modern authentication

     ○   Conditional Access

2. Which of the following technologies eliminates the need to enter a username and password combination into certain email and Microsoft Office applications on your mobile device?

     ○   Windows Information Protection

     ○   Multi-factor authentication

     ○   Certificate-based authentication

3. Which of the following technologies allows you to force the use of a PIN when starting up the device?

     ○   Mobile device management

     ○   Mobile application management

     ○   Conditional Access
