Summary and knowledge check

5 minutes

The Microsoft 365 security center empowers security administrators and operations personnel to use the intelligence built into Microsoft solutions enabling your organization to maintain a consistent and robust security posture. Centralized and in-depth reporting focused on critical areas – identity, data, devices, and apps – provides real-time visibility to make informed decisions. In combination with Microsoft Secure Score, security administrators have the insights, visibility, and control needed over the organization's security position.

Check your knowledge

1. What are the four categories of reporting found in the Microsoft 365 security center?

○   Identities, data, end points, apps

○   Identities, compliance, devices, apps
